

Objective

The objective of this policy is to establish a clear set of values and objectives for the effective management of environmental performance across the organization.

Policy

TAG Oil's (TAG's) Core Values outline the requirements to achieve a high standard of environmental performance.

TAG is committed to ensure our operations are conducted in an environmentally responsible manner. To accomplish this, all employees and contractors performing any work on TAG's behalf will conduct their work in accordance with the environmental laws of any jurisdiction in which they are working, as well as the policies and procedures outlined in TAG's Health, Safety and Environment Management System.

The following principles will guide all TAG management, staff and contractors;

- Ensure compliance with all application laws and regulations
- Integrate systematic hazard identification and risk mitigation tools into all of our operations, ensuring we effectively manage and mitigate the likelihood and consequence of major accidents or incidents
- Design, construct, operate and maintain our assets with the goal of preventing environmental incidents
- Strive to reduce emissions, make efficient use of resources, minimise our environmental footprint and conserve animal and plant habitats that may be affected by our operations
- Report and thoroughly investigate all environmental incidents, including near misses, spills and non-conformances
- Ensure all workers are properly trained to perform their work in an environmentally safe and competent manner
- Provide effective systems, processes and resources to achieve the objectives of this policy
- Set measurable environmental targets; monitor and report on performance, ensuring the continuous improvement of TAG's Health, Safety and Environment Management System.

TAG supports individual and industry efforts to protect the environment in which TAG conducts work. We recognize that to achieve excellence in environmental performance a process of continuous improvement is required. We welcome and encourage suggestions on ways in which we can improve our Health Safety and Environment Management System.
